WORK EXPERIENCE

Zocdoc

April. 2025 – Present

Senior Software Engineer, AI Voice Agents

New York, NY

- Architected and scaled a generative AI medical voice agent platform from inception to over 50,000 automated calls daily; recognized by Liine as the #1 top-ranked medical phone agent.
- Partnered directly with the CTO to rapidly design and deploy a conversational system integrating a voice agent, EHR systems, a low latency C# agent tools server, and LLM-powered metrics.
- Built comprehensive LLM evaluation and regression-testing infrastructure to measure hallucinations, task completion accuracy, latency, and conversation quality, preventing production regressions during rapid iteration.
- Led research efforts into model selecting and hosting. Cut costs while improving reliability and lowering latency.

Pager Health

Nov. 2023 – April 2025

AI Software Engineer

Remote

- Developed and deployed an advanced AI data pipeline for medical chat summarization and proactive supervisor alerts, integrating analytics and user feedback loops that increased accuracy and elevated Net Promoter Score (NPS) above 80.
- Built and launched an NLP-driven AI Wellness Assistant with generative AI oversight to manage urgent clinical encounters, improving response time and user satisfaction.
- Proactively implemented telemetry for a chatbots service handling over 1,000 clinical chats daily, decreasing bug reports by 80% and significantly improving user experience.

Nordstrom

July. 2022 – Nov. 2023

Software Engineer

Seattle, WA

- Engineered and supported a large-scale distributed payments system leveraging Apache Kafka and Java, reliably processing \$20M+ in daily transactions.
- Actively managed on-call duties to swiftly identify, troubleshoot, and resolve critical production incidents, developing automation scripts that reduced downtime.
- Designed, implemented, and deployed a robust RESTful API for Gift Card management, enhancing internal operational efficiency and customer experience.

Virgin Pulse

Summer 2018

Machine Learning Intern

Framingham, MA

- Developed and tuned fraud detection neural nets using Scikit-learn, CoreML, and Keras, building predictive pipelines and visualizations from labeled behavioral datasets.

EDUCATION

University of Rochester

2018 – 2022

Bachelor of Science, Chemical Engineering

Rochester, NY

- Dean's List, Dean's Scholarship, Computer Science minor, Music Theory concentration

SKILLS & INTERESTS

- **Skills:** Java, JavaScript, Python, C#, Go, Swift, SQL, NoSQL, NLP, LLM, RAG, PyTorch, CoreML, AWS, GCP, Terraform, Kubernetes, Docker, Splunk, New Relic, HIPAA/PHI, React, Node, NX, Microservices
- **Interests:** Running; Guitar; Songwriting; Cooking; Seinfeld
